Welcome!

How to get started without previous experience

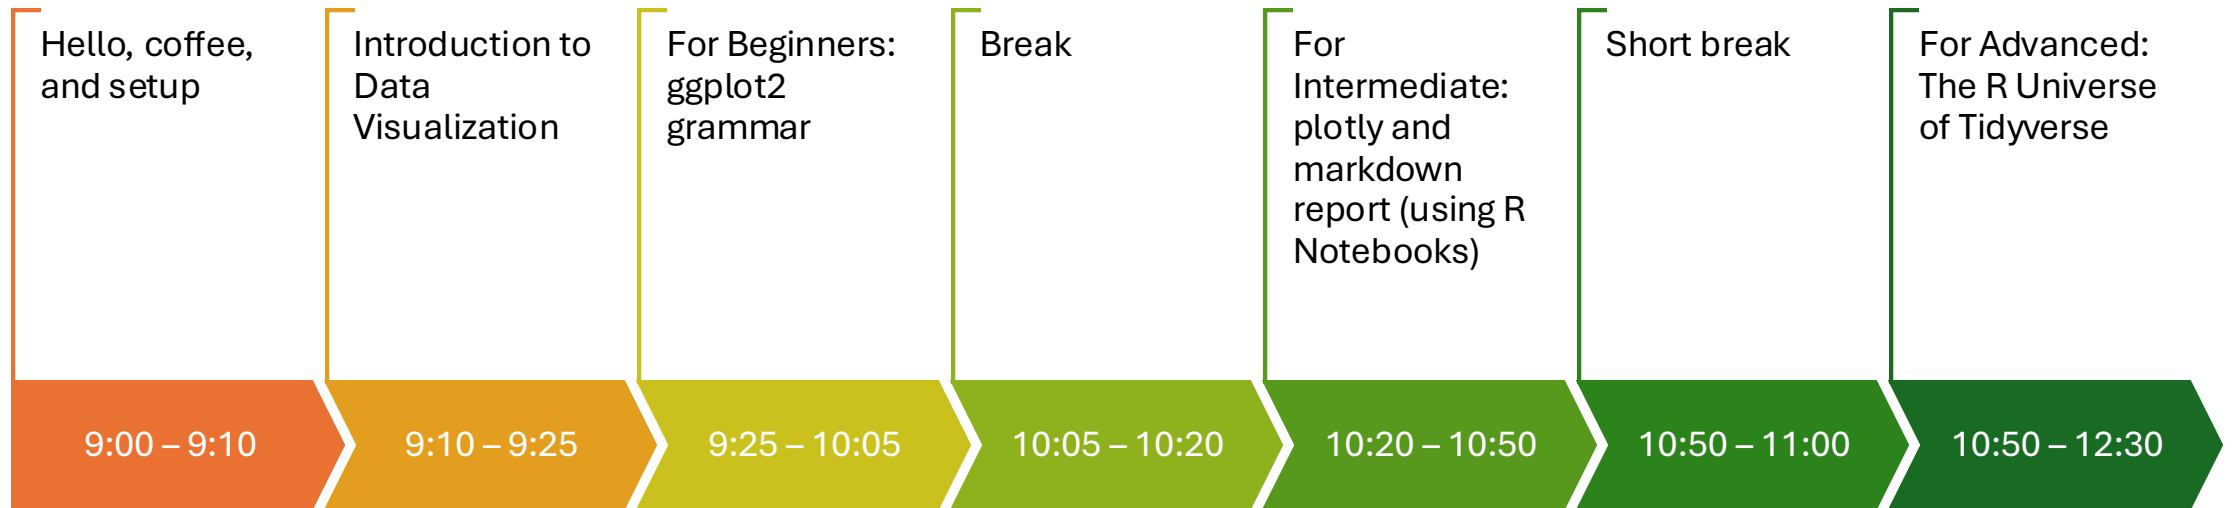

I've never used R and I'm interested in learning how to use it and how to represent data through it

best practices for data storytelling.

Practical ways to construct nice visual plots. When sharing codes (for publications) does codes for visuals should also be there?

I would like to learn how to make good looking graphs for publication and how to combine multiple images into one with corresponding labels and legends. So far, I manage with the help of AI, but it would be nice to have more solid foundations.

Agenda

What is Data Visualization?

- It is the graphical representation of data or information

<https://r-graph-gallery.com>

Principles of Good Visualization

| Principle | Description |
|------------------------------|--|
| Show the Data | Clearly present the data without unnecessary elements that distract from understanding. |
| Avoid Distorting Data | Represent data accurately; avoid misleading scales or transformations. |
| Enable Comparisons | Make it easy to compare data points, trends, or categories visually. |
| Show Variability | Highlight uncertainties or variations, such as with error bars or confidence intervals. |
| Integrate Evidence | Combine text, numbers, and graphics to strengthen the narrative and insights. |
| Use Visual Hierarchy | Organize elements so the most important information stands out clearly. |
| Consider the Audience | Tailor visuals to the audience's level of expertise and interests. |
| Aesthetic Integrity | Ensure the visualization is attractive but does not compromise accuracy or clarity. |
| Direct Attention | Use cues like color, labels, or annotations to focus the viewer on key aspects of the visualization. |
| Keep it Simple | Remove unnecessary elements and focus on the essential aspects of the data. |

Principles of Good Visualization

Principles of Good Visualization

- What can you say about the first plot?
- How about the second one?
- What would you make different?

What can we say about both plots?

Direct Attention

Introduction to ggplot2

ggplot2 uses a conceptual framework based on the grammar of graphics

7 composable parts

Mandatory elements: **data**, **mapping** and **layer**

| country | year | cases | population |
|-------------|------|--------|------------|
| Afghanistan | 1999 | 31737 | 1557071 |
| Afghanistan | 2000 | 3666 | 20995360 |
| Brazil | 1999 | 31737 | 17206362 |
| Brazil | 2000 | 80488 | 17404898 |
| China | 1999 | 212258 | 1272115272 |
| China | 2000 | 210766 | 128078583 |

variables

| country | year | cases | population |
|-------------|------|--------|------------|
| Afghanistan | 1999 | 31737 | 1557071 |
| Afghanistan | 2000 | 3666 | 20995360 |
| Brazil | 1999 | 31737 | 17206362 |
| Brazil | 2000 | 80488 | 17404898 |
| China | 1999 | 212258 | 1272115272 |
| China | 2000 | 210766 | 128078583 |

observations

Tidy data:
rows are observations and columns are variables

Pratical

Real life in DataViz

Making Coding Easier

```
alpha_info_tab %>%  
  filter(Study == "Exp1") ->  
Exp1
```

Pipe:
pronounced
"then"

Reverse
assignment
operator:
"creates"

Variable

tidy format (we're going to explore it in the next section), which briefly means a rectangular data frame structure where rows are observations and columns are variables

| country | year | cases | population |
|-------------|------|--------|------------|
| Afghanistan | 1999 | 37745 | 199837071 |
| Afghanistan | 2000 | 2666 | 20095360 |
| Brazil | 1999 | 37737 | 172006362 |
| Brazil | 2000 | 80488 | 174504898 |
| China | 1999 | 212258 | 1272915272 |
| China | 2000 | 210766 | 1280425583 |

variables

| country | year | cases | population |
|-------------|------|--------|------------|
| Afghanistan | 1999 | 37745 | 199837071 |
| Afghanistan | 2000 | 2666 | 20095360 |
| Brazil | 1999 | 37737 | 172006362 |
| Brazil | 2000 | 80488 | 174504898 |
| China | 1999 | 212258 | 1272915272 |
| China | 2000 | 210766 | 1280425583 |

observations

values

A good Plot,
you cannot do,
without first a
bad Plot, doing.
